

Bale Wrap End Caps

Seal Wrapped Rows of Forage Bales

End caps are used to effectively seal off your row of bales when using bale wrap. They are white, 4-millimeter-thick, UV stabilized flat bags used on the first and last bale for in-line wrapping. When looking at the sizes available, the first number listed is the diameter for the opening of the bag, and the second number is the depth of the cap.

Available Bale Wrap End Cap Sizes

- 88" x 72" – Ideal for a 4' bale
- 93" x 72" – Ideal for a 4.5' bale
- 110" x 72" – Ideal for a 5' bale
