

Silage Tire Sidewalls

Tire sidewalls are the perfect tool to use when trying to keep your bunker cover exactly where you want it. University studies have proven unanimously that tire sidewalls provide the best protection for crop spoilage by greatly minimizing exposure to air, water, disease, and mold. While whole tires trap stagnant water, insects, and other pests, sidewalls will help you improve your hygiene, save labor, and help improve your silage. Tires are available for delivery directly to your farm, as well as pickups at our office location. We offer solid bias tires (without wire) and Radial Tires (with wire) with about 2,220 tires per truck load.

Recommended 1 tire for every 7 square feet of pile you are covering.
